

Trandata — a dynamic, young company ready to take on the future

Trandata is the leading technology provider for drayage companies in South Florida that specialize in transporting containers between ports and warehouses.

Established in 1999, Trandata is a dynamic company that fulfills a critical need in the intermodal transportation industry. Trandata envisions a world where truckers have real-time dispatch tools and can provide their customers with complete visibility to container movements. Kaz Chary, the company's president and chief executive, brings more than two decades of e-commerce and supply-chain experience to turn this ambitious vision into reality.

Trandata currently serves more than 60 South Florida companies, offering a drayage

management system, container tracking services and online management tools for truckers and their customers. This year, Trandata will expand our success nationally, beginning with seaports in New Jersey and California.

Trandata's flagship product for truckers is DMS (Drayage Management System). DMS was designed specifically for the drayage business, and is not an extension of full truckload or less-than-truckload packages. Trandata understands the day-to-day challenges that truckers face, and we've designed DMS from a trucker's point of view. Even our business processes are built around the drayage business: We are bilingual and offer support 24-7.

For many truckers, the current process of managing containers involves multiple phone calls and numerous pieces of paper. Using DMS to automate per diem tracking, demurrage, work orders, billing, settlement and payroll can save significant time and money. Used by more than 70 percent of local trucking companies, DMS is the No. 1 trucking software in South Florida.

Additionally, through Trandata Data Services, the company offers truckers the ability to communicate securely and reliably with their EDI-capable customers. Where EDI is not yet an option, drayage companies can differentiate themselves by offering customers Trandata's Online Container Tracking,

a convenient and secure Web-based method of tracking containers.

With Trandata, trucking companies can move from paper- and phone-oriented operations to those based on e-commerce. We allow transportation service providers to

become more timely, cost-effective and accessible to their customers. Using our products and services, our trucking clients can easily provide status for containers, reduce service failures and offer better overall customer service. ■

Just some of our many customer testimonials...

"DMS is one of the best business investments we've made, a solid product coupled with personalized service"

"DMS helped me recover over \$20,000 in lost per diem charge backs!"

"We expanded our business by 30% without increasing one staff member!"
